Like the word taler, 'yefimok' derived from the name of Joachimsthal, passing into Russian from the Polish word joachimik. The Soviet Academy of Science Dictionary of the Russian language, 11th to 17th centuries (eds S G Barkhudarov and G A Bogatova, Moscow, 1978) distinguishes three usages of these talers as silver coins struck by many Western European countries and made use of in Russia in the 16th and 17th centuries as a basic monetary medium. The Moscow mint made these yefimoks on foreign silver coins by countermarking them with the above described countermarks. It was valued at one ruble or 64 kopecks.

Transylvania did not fall to Turkish control but was forced to submit to Hungary to preserve itself. When Hungarian power collapsed in 1526, Transylvania survived as an independent principality until 1699, then it fell under Habsburg control. The abundance of gold and silver in the mines of Transylvania ensured a plentiful coinage which mostly used heraldic emblems for its designs, notably the arms of the House of Bathory. Sigismund Bathory (1581-1602) used a fine series of magnificent portraits.
